SUMMARY

Computer Science & Engineering graduate specializing in backend engineering for AI-driven systems, with hands-on experience building LLM-integrated applications: conversational pipelines with asynchronous task orchestration, and Retrieval-Augmented Generation (RAG) systems that ground LLM outputs in external data. Strong foundation in Python, Django, FastAPI, and REST API design, with a growing focus on agentic AI engineering — orchestrating LLMs, tools, and stateful context into reliable backend systems.

TECHNICAL SKILLS

Backend: Python (Advanced), Django, Django REST Framework, FastAPI

Agentic AI / LLM Systems: LLM Orchestration (Ollama, Qwen3), Tool Integration, Stateful Context Management, RAG Pipelines, Async Task Orchestration (Celery, Redis)

Databases: PostgreSQL, MySQL, SQLite, ChromaDB (Vector DB)

GenAI Components: Sentence Transformers, Embeddings, Semantic Search, Document Retrieval

Frontend: HTML5, CSS3, JS

Tools: Git/GitHub, VS Code, Docker, Postman

Other: REST APIs, WebSockets, OOP, SQL

INTERNSHIP / TRAINING

Python Full Stack Trainee — QSpiders Sep 2025 (6 Months)

- Trained in backend development with Django and Django REST Framework, building and consuming RESTful APIs.
- Worked with relational databases including MySQL and SQLite; hands-on practice with query optimization and schema design.
- Gained frontend exposure in HTML5, CSS3, and JavaScript to support full-stack project delivery.

PROJECTS

OmniChat AI – Conversational LLM Orchestration Platform *Django · Django REST Framework · Django Channels · WebSockets · Celery · Redis · Ollama (Qwen3)*

- Designed a backend orchestration layer routing conversation turns between REST/WebSocket clients, a task queue, and a locally hosted Qwen3 LLM tool via Ollama.
- Implemented real-time bidirectional communication using WebSockets via Django Channels for live agent-style responses.
- Decoupled LLM inference from the request cycle using Celery and Redis, so AI generation runs as an asynchronous background task instead of blocking the API.
- Maintained stateful conversation context across turns using Redis, and validated API/WebSocket orchestration flows using Postman.

DocMind – Retrieval-Augmented Reasoning Pipeline *FastAPI · Python · PyMuPDF · Sentence Transformers · ChromaDB · Ollama (Qwen3)*

- Built a multi-step RAG pipeline (extract → chunk → embed → retrieve → generate) that grounds a local Qwen3 LLM's answers in a document knowledge base via FastAPI.
- Extracted and chunked PDF text with PyMuPDF, then generated semantic embeddings using Sentence Transformers.
- Stored embeddings and metadata in ChromaDB as the LLM's external memory/retrieval tool; implemented cosine-similarity retrieval with document-level filtering and relevance thresholding.
- Orchestrated retrieval and generation so the LLM consults document context before answering, with source-page tracking for traceability.
- Developed FastAPI endpoints for PDF upload and document Q&A with a browser frontend in HTML, CSS, and JavaScript.

SkySnap – Weather Web Application *Django · Python · OpenWeather API · HTML CSS*

- Built a real-time weather app with Django, integrating the OpenWeather API for live temperature, humidity, and wind data.
- Implemented city-based search, dynamic weather icons, and localized date/time display with a glassmorphism UI.

Django To-Do List Web Application *Django · Python · PostgreSQL · HTML CSS*

- Developed a task management app with full CRUD operations (add, update, delete, mark complete) using Django ORM.
- Structured backend with clean model–view–template architecture ensuring smooth data handling.

Student Management System *Python · Flask · MySQL*

- Built a web-based system to manage student records with add, update, delete, and view features using Flask and MySQL.

EDUCATION

BE in Computer Science & Engineering (AI & ML) — Mumbai University 2022 – 2026

ARMJET College, Thane

HSC Science — K V Pendharkar College of Arts, Science and Commerce 2022

CERTIFICATIONS & ACHIEVEMENTS

- **Python Full Stack Development Training** – QSpiders (Sep 2025): Backend with Django, REST APIs, databases, and frontend technologies.
- **Entrepreneurship Awareness Program** – Tata STRIVE (Apr 2026): Certified in entrepreneurship fundamentals, business planning, and startup development.
